

Habitat stations

One dome, one room. The thirteen-day run happens on a single floor under a hexagonal shell: every station the crew need stands in reach of every other, and nothing is resupplied after the hatch is sealed.

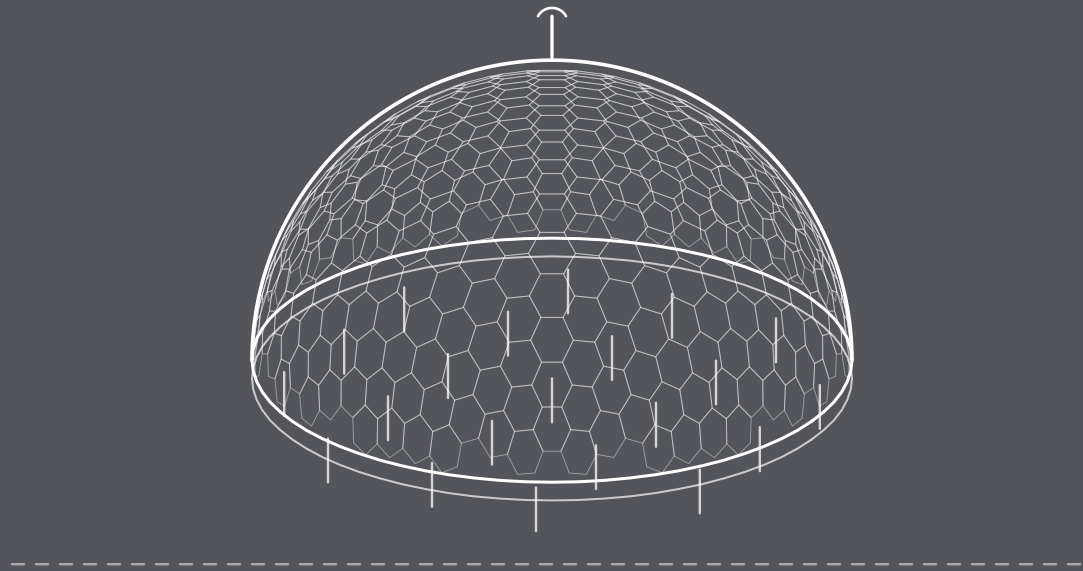

Platform layout

the ten stations on the deployed hexagon platform

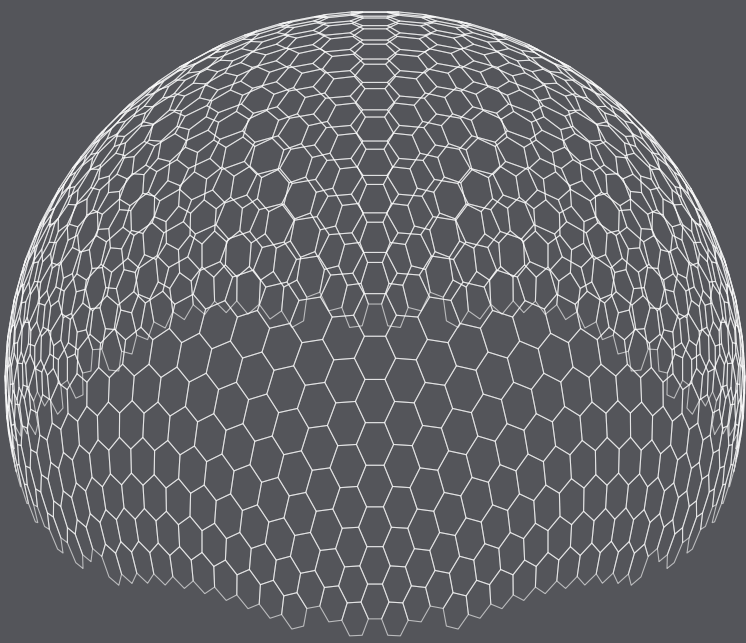

Assembled

shell over platform — the state the run opens in

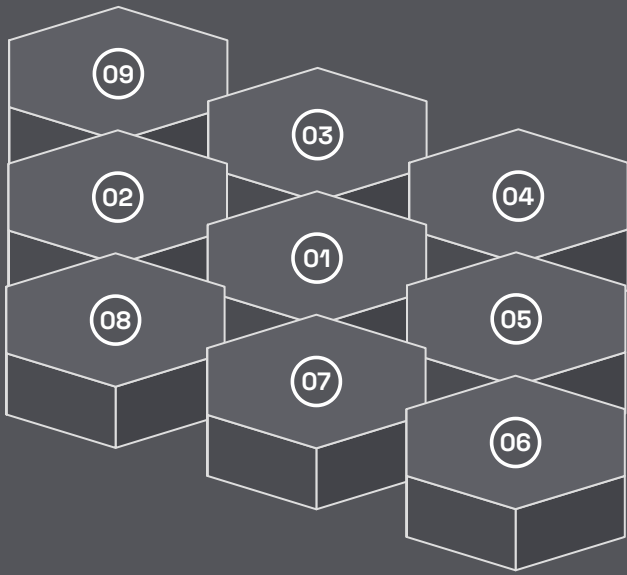

Main dome

hexagonal ETFE shell

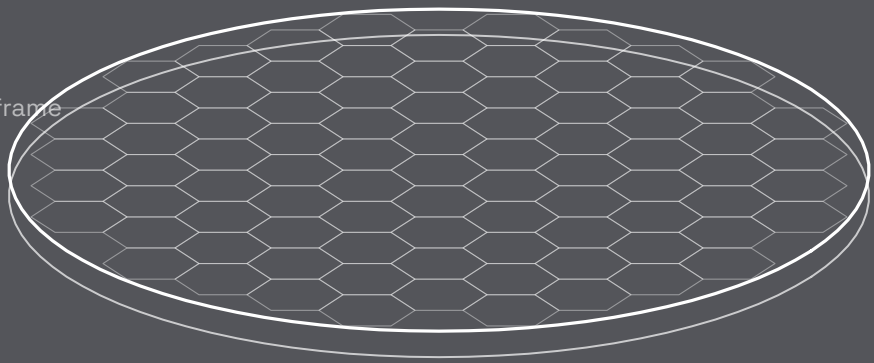

Station modules

the numbered work cells, one per station

Telescopic supports

The loop

Power is made in the room: the crew pedal the cycle (09), the array outside (10) harvests the sky; both charge one battery.

Water circles through the recycler (08); every store's level stands on the front page as days remaining.

Greens grow on the racks (07), live protein in the terrarium (06), cooked at (05) as the day's meal plan.

Three astronauts — communication, science, health — sleep in the pods and file the record daily.

STATIONS

- 01 Communication station
- 02 Science station
- 03 Sleeping pod A
- 04 Sleeping pod B
- 05 Cooking station
- 06 Cricket terrarium
- 07 Hydroponic garden
- 08 Water recycling
- 09 Power cycle
- 10 Solar array

The dome forms one pressurised room — every station in reach of every other
