

MARS! / SCIENTIFIC MISSION

MISSION No.

2

RED DUST CITY

HOW HUMANS COLLABORATE

CENTRAL QUESTION

How do we still work together, if we are on different planets or if we see the world differently?

MORNING

Build something in 20 minutes. One person sees a picture and explains it; the others build.

Communication conditions to test:

- speak normally
- only write
- send a message every two minutes

Measure:

- time until the thing is built properly
- how many errors occur during the day
- how many acts of communication are needed

AFTERNOON

Building a whole from the pieces:

Fictitious scenario: large water-recycling station arrives tomorrow. All astronauts get a separate letter of instructions that doesn't have the whole picture, but only parts. They need to come to a common solution through verbal communication.

EVA

COMMUNICATION EFFICIENCY

- Find 5 specific things and document them (astronaut inside the habitat has the list of things).
- Communication is only possible every 5 minutes.
- Maximum of 20 words per message.
- Astronaut inside keeps the clock

QUESTION FOR THE COMMUNITY HOUR

What information would you send to astronauts who cannot see the outside?
What is one thing happening back home / in Karlsruhe that we should know about?

Was ist eine Sache die zu Hause / in Karlsruhe grade passiert, über die wir auf dem Mars Bescheid wissen sollten? Was sollten Astronauten, die die Erde grade nicht sehen können, über sie wissen?

MATERIAL – WHAT DOES THIS NEED

Building blocks with laminated photos of results; stopwatches; paper & pen or laptop, photo camera
