RED DUST CITY

SPACE & SPACES

CENTRAL QUESTION

Placemaking is an intentional activity – how do we use the spaces we are given, how do we create a space that feels a certain way?

MORNING

HABITAT MAPPING

Map the Habitat by scenes / activities: sleeping, working, eating, retreat, storage, community, paths.
→ Make a scene map of the Habitat.
→ Observation period: Who is where, when and why?
→ Planned spatial layout vs. actually used space.

AFTERNOON

PEOPLE WATCHING

At the marketplace: where do people stand, where do they stay, where do encounters happen, where do people avoid each other?
→ “Pockets of Encounter” – “Pockets of Avoidance”.

EVA

CLAIMING / REDIRECTING SPACE

Use chalk to delineate parts of the habitat from the prototypes we haven't built on marktplatz and mark them as one of two zones: encounter or avoidance

Ask:

- Who respects the zone?
- Who ignores it?
- Who is curious?
- How long does it remain?

Reflection: How much private space does a person need? How much public space does a society need?

QUESTION FOR THE COMMUNITY HOUR

Where in public space do you feel at home, and what gives you a feeling of “belonging”?

Wo im öffentlichen Raum fühlst du dich zu Hause, wo gehörst du hin?

MATERIAL – WHAT DOES THIS NEED

Chalk, Voice Recorder, Pen/Paper, laptop
