RED DUST CITY

SETUP HABITAT AFTER TOUCHDOWN

CENTRAL QUESTION

What does it take to turn an empty shell into a habitat that keeps us alive and connected?

MORNING

AFTERNOON

EVENING

TOUCHDOWN – THE CREW MOVES IN

- Habitat: check the modules against the packing list; stow the supplies.
- Power: connect battery and power bike, switch on circuit by circuit, read the meters.
- Scenography: lights, signs, the crew's corners.
- Communication: connect the ground station; send a first message to Earth.

TEST EVERYTHING

- sensors, power, network, cameras, water, light, doors, emergency exit
- Mark each point: works / partly / does not work.

Ask: What would we notice first if something failed, and who repairs what?

QUESTION FOR THE COMMUNITY HOUR

What is the first thing you would set up in a new home far away?

Was würdest du an einem neuen Ort weit weg als Erstes einrichten?

MATERIAL – WHAT DOES THIS NEED

Packing list, toolbox, cable ties, gaffa tape, extension leads, power meters, power bike, laptop, router, cameras, labels
